WHY TO PREFER BCOOL LTD GEOHERMAL HEAT PUMPS

At BCOOL LTD we believe in combining comfort, efficiency and sustainability. Our geothermal heat pumps utilize the natural energy stored beneath the earth's surface to provide **reliable heating and cooling all year round**. With BCOOL GEO NF-414 Series you don't just heat and cool your home – you **invest** in a smarter, cleaner future!

Go Green. Stay Cool. Save Big.

BCOOL LTD – Power from the Earth – Comfort for you

Slash your bills → Cut your energy costs by 30-40%

Eco-friendly Comfort → Utilize the power of Earth

All-season reliability → Stay warm in winter, cool in summer

Built to last → Long lifespan with proper usage and maintenance

Join our expanding customers base

Heating Capacity

8.16 kW – 97.20 kW

Cooling Capacity

7.38 kW – 87.93 kW

The **BCOOL GEO NF-414 Series** includes packaged water cooled heat pumps for geothermal applications and indoor/outdoor installation. They are available in several types and models with capacities ranging from **8.16 to 97.20 kW in heating** and **7.38 to 87.93 kW in cooling**.

The BCOOL GEO NF-414 SERIES is certified by ECC for the NF-414 Heat Pumps program.

This series is ideal, in combination with underfloor heating/cooling systems or water terminal units/air-handling units, for air-conditioning of residences, school complexes, office-buildings, hotels, hospitals etc. or for supplying hot or cold water in industrial applications.

- **Optimized design** for R410a refrigerant.
 - Casing: Galvanized steel plate with polyester coating.
 - Assembly: Fully bolted/welding free.
 - Compressor: Hermetically sealed scroll type.
 - Water heat exchanger (source/system): Brazed, plate type.
 - Electronic Expansion Valve.
 - Electronic microprocessor control with digital display.
- **Safety and functional devices:**
 - High/low pressure switch.
 - Sequence-phase failure-reverse and voltage monitoring device.
 - Evaporator low temperature protection.
- **Options:**
 - Differential water pressure switches.
 - High/low pressure manometers.
 - Desuperheater for sanitary hot water up to 80°C.
 - Hydraulic module with pumps and all necessary devices.
 - Bus module interface kit for Modbus connection.
 - Remote keyboard.
 - Various optional capabilities.

Generally:

The BCOOL GEO NF-414 Series consists of 10 models, with heating capacities ranging from 8.16 up to 97.20 kW and cooling capacities from 7.38 up to 87.93 kW. It is the outcome of a thorough study and accurate design by experienced BCOOL R&D team to develop and produce geothermal heat pumps with compact shape, high performance and reliability of the highest quality standards.

This series meets the highest levels of aesthetic and technical requirements, using the latest technological innovations, including environmentally friendly R410a refrigerant, that is chlorine-free and has zero ozone depletion potential. GEO NF-414 units are therefore ideal for installation in residential, commercial and industrial applications, due to their robust construction, high-efficiency performance, reliability, selected materials and low operating sound levels.

Casing:

All units use metal parts that are fabricated from heavy gauge galvanized steel sheets, formed to ensure maximum rigidity, that guarantees and preserves the unit's operation during the years. After fabrication, the sheets are degreased, phosphatized and electrostatically powdered with an epoxy-polyester RAL 9016 (Traffic White) coating of a thickness of 60-70 μm .

This fully automated process ensures superior corrosion resistance against the most aggressive ambient conditions. This treatment can withstand a salt spray test of 500 hours according to ASTM B-117.

All components are assembled together using bolts, thus avoiding the need for welding which may harm the galvanization of the steel and ensuring that the whole assembly can fully withstand adverse weather conditions.

The compact footprint of the unit arises from detailed study and design by our engineering team and results in a machine that easily fits in restricted areas, is simple and easy to install and maintain and is designed for easy transportation and lifting.

Removable side panels with special locks are used to permit access only to authorized personnel to internal components of the unit, for inspection and maintenance. Electrical and electronic equipment and components for the proper unit's operation are located inside a weatherproof (IP 55) electrical panel.

Compressors:

All units use low-noise, maintenance-free, hermetic scroll compressors with low vibration levels, especially optimized for R410a refrigerant, provided only from world-class manufacturers. Compressors could be equipped with a crankcase electrical heater for the oil and are internally protected against potential overloading or electrical spikes.

The compressors are mounted on special antivibration rubber mounts, to absorb and eliminate any vibrations from the unit's operation. A noise reduction jacket, with excellent sound absorbing properties, could also be used.

Water Heat Exchanger (source & system):

All units are equipped with a water Braze Plate Heat Exchanger, selected from world class manufacturers. It is made of stainless steel plates (AISI 316/1.4401), especially formed to achieve a large heat transfer surface and assembled by means of an automatic brazing process, under vacuum.

There are probes for water temperature sensors and the whole heat exchanger is wrapped in a heavy insulation material.

Refrigerant circuit:

GEO NF-414 models, from 008 up to 090, have one refrigerant circuit. The expansion device is an electronic expansion valve, ensuring constant suction gas superheat at all operating conditions.

Other components fitted are: 4-way reversing valve, check valve, suction accumulator (optional), liquid receiver (optional), sight glass (optional), large capacity filter dryer and high/low pressure manometers.

Unit protection is provided by a high/low pressure switch with auto reset.

Microprocessor controller:

All units are equipped with a sophisticated controller, that combines intelligence with operating simplicity. The controller constantly monitors all machine parameters and precisely manages among others:

- Automatic compressor control function through return water temperature.
- Frost protection.
- Hydraulic circuits pump control.
- Compressor's start-up time delay function.
- Compressor's running time records.
- Numerous programmable parameters.
- Auto diagnostic stop function due to low water circulation (flow switch).
- Auto diagnostic stop function due to improper high or low operating pressure.
- Auto diagnostic stop function due to compressor's thermal overload.
- Digital display of various error codes.
- Digital display of inlet and outlet source and system water temperatures.
- Switch for remote on/off.
- Switch for remote control in cooling/heating mode.

Optional control capabilities:

- ❖ Remote keyboard.
- ❖ BMS module interface kit for Modbus connection.
- ❖ Parallel chiller operation with optional controller.
- ❖ Wi-Fi operation and cloud connection for remote monitoring.

Other unit accessories/options:

- Compressors with inverter driven motors.
- Differential water pressure switches.
- Pressure relief valve on compressor discharge.
- Hydraulic module with pumps and all necessary devices.
- Water heat exchanger anti-freezing electrical heater.
- Compressor noise reduction jacket.
- Control for two pumps (one stand-by).

NOTES

*(1) Heating performance is calculated for the following operational conditions:
Source Water Temperature Inlet/Outlet: 10 °C / 7 °C and Entering/Leaving System Water Temperature: 30 °C / 35 °C (EN14825:2022)

*(2) Cooling performance is calculated for the following operational conditions:
Source Water Temperature Inlet/Outlet: 30 °C / 35 °C and Entering/Leaving System Water Temperature: 12 °C / 7 °C (EN14825:2022)

*(3) Heating performances are certified by ECC according to NF-414 program (EN14511:2022 & EN14825:2022)

*(4) According to EN14511:2022 & EN14825:2022.

*(5) All connections to the system and the electrical installation must be in full accordance with the applicable national and local codes.
